Airport Noise Control Strategies

Introduction

→ The Federal Aviation Administration's (FAA) Airport Noise Control Strategies Data File contains a comprehensive listing of airport noise control actions. The information contained in this data file is an updated version of the June 1983 Airport Noise Control Strategies report. Originally, the data were collected from the Environmental Data Bank of March 1979, the National Business Aircraft Association and the Aircraft Operators Council International. Additional data were garnered from the FAA Airport Facility Directory. For this version, the FAA regional offices reviewed the latest information and made appropriate changes. → DCT # 1700.7

The data file is run on an IBM personal computer using the RBase 5000 database management system. The database can sort out information for individual airports or, for a specific noise control strategy, identify the airports using it. This database is kept current as changes in the airports occur.

Some additional information has been included in this report which we hope will make the document more useful. A contact telephone number has been identified for most of the airports. This number is either the airport manager's office or a noise abatement officer at the airport. For more details on a specific airport, call these numbers. Also, the total number of operations at the airport on an annual basis has been added. The total number of operations include air carrier, air taxi, general aviation and

military operations at an airport. This information was taken from an FAA report entitled "FAA Air Traffic Activity FY 1984" which lists air traffic activity information as reported by FAA-operated airport traffic control towers. Those airports that do not have their number of operations listed do not have FAA-operated airport traffic control towers.

While the FAA has made every effort to ensure that the listing is both complete and accurate, the data contained in this report may not reflect all U.S. airports that have taken significant noise control actions.

Extent of Local Actions

Approximately 400 local airports have reported taking some kind of action to reduce aircraft noise or to mitigate the effects of that noise. The number of airports has been reduced from the previous report due to changes at the airports and the restructuring of the noise control strategies categories. The geographic distribution of the airports is shown in Figure 1. As can be seen from that figure, every state has at least one airport that has taken some noise control action. Many states have six or more such airports.

While many airports reporting local noise actions have scheduled air carrier service, about one half do not. Both large and small airports initiate such actions.

The listing of local actions in this report does not imply FAA review or approval of the appropriateness, impact, or legality of such actions.

Uses of the Data File

This data file is intended to serve all elements of the agency and other organizations as a central compilation of airport oriented actions taken to control, reduce and/or minimize the impact of aviation noise. It may be used as a quick reference to verify information already acquired or can produce a detailed listing of information for individual or all airports included in the file.

Organization

There are two sections in this report. The first section lists each airport's three letter location identifier (LOCID), name, city and state, and the strategies which apply to it. It is divided into sections according to the FAA regions. The second section lists each noise control strategy and the airports that have been identified for that particular strategy.

Description of Categories

The noise control strategies currently consist of 37 categories which describe the airport's procedures for noise abatement or mitigation. The following is a brief explanation of each category.

1. State Noise Law - A law related to airport/aircraft noise control which is governed by the State.
2. Local Noise Law or Ordinance - A noise control law or ordinance which is airport/aircraft related and administered at the local level of government.

3. Airport Master Plan - This category indicates that an airport has completed an airport master plan.
4. ANCLUC Plan - An Airport Noise Control and Land Use Compatibility Plan has been completed.
5. Part 150 Noise Exposure Map Approved - A noise exposure map has been approved by the FAA in accordance with the provisions of FAR Part 150.
6. Part 150 Noise Compatibility Plan Approved - An airport noise compatibility plan has been approved by the FAA in accordance with the provisions of FAR Part 150.
7. Development of an EIS - One or more Environmental Impact Statements have been completed.
8. Noise Monitoring Equipment: Temporary or Permanent - This category includes airports that employ either temporary or permanent noise monitoring equipment.
9. Restriction on Ground Run-up - A restriction involving the time of day or airport location that engine run-ups can be conducted.
10. Limit on the Number of Operations by Hour, Day, Month, Year or Noise Capacity - This restriction curbs the number of aircraft departures and/or arrivals in a given time interval or by noise capacity.
11. Preferential Runway System - This system generally routes traffic over certain runways in order to minimize aircraft flight over noise sensitive areas.
12. Runway Restriction Imposed for Specific Aircraft Type - A restriction on a specific aircraft type using certain runways would be in this category.

13. Use Restriction by Aircraft Type or Class - An airport restriction that bans certain types or classes of aircraft either totally or for certain times of day.
14. Use Restriction Based on Noise Levels - An airport restriction that bans aircraft which exceed a certain noise level.
15. Use Restriction Based on Part 36 - A restriction on aircraft that do not meet one or more of the FAR Part 36 noise level requirements.
16. Use Restriction Based on AC 36-3 - A restriction on aircraft that are above some locally-determined noise threshold level, based on the noise levels listed in Advisory Circular 36-3 or later revisions.
17. Complete Curfew - Complete closure of an airport for noise during any period of time (usually at night).
18. Arrivals and/or Departures Over a Body of Water - A restriction which routes arrivals and/or departures over a body of water for the purpose of avoiding overflight of noise sensitive areas.
19. Displaced Runway Threshold - This restriction reduces the runway length available for arrivals and/or departures to minimize off-airport impacts.
20. Rotational Runway System - The airport uses a rotational system for the use of certain runways to limit the time that surrounding noise sensitive areas are overflown.
21. Maximum Safe Climb on Takeoff - Rapid climb to altitude to minimize takeoff noise impacts on communities 5 to 10 miles from lift-off.

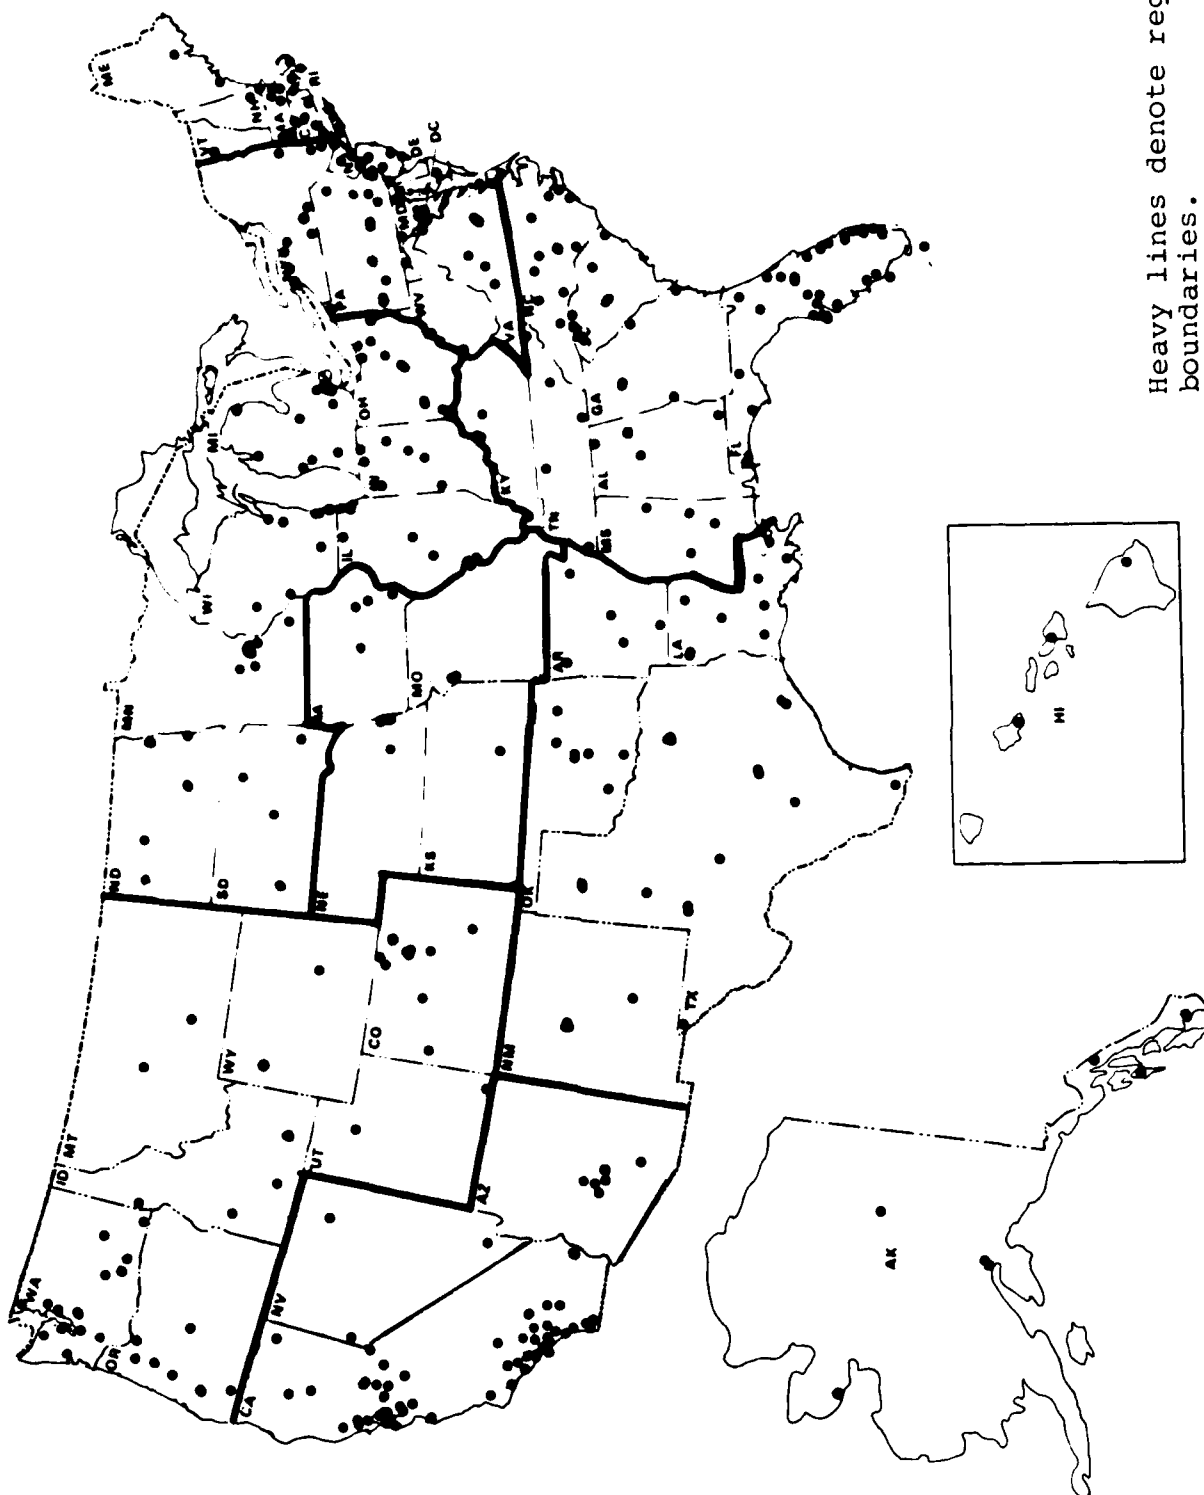

22. Takeoff Thrust Reduction - Low-power climb to altitude to minimize takeoff noise impacts on close-in communities.
23. Reverse Thrust Limits - Limitations on the use of reverse thrust during landing.
24. Flight Training Restriction - Aircraft are prohibited from making practice takeoffs and approaches either totally or during certain hours of the day.
25. Weight or Thrust Limit - This restricts aircraft over a certain weight or thrust limit from using the airport.
26. Informal Flight Operation Restriction - Any restriction which is not formally enforced by the airport but requested as a procedure to limit noise.
27. Zoning - Any use of local zoning laws to restrict incompatible land uses surrounding the noise impact areas of the airport.
28. Purchase Land for Noise Control - Airport acquired incompatible land for the purpose of alleviating noise impacts.
29. Use of Capital Improvements to Direct Development - Actions taken by the local government or airport sponsor to restrict development in the noise impact areas of the airport while directing noise sensitive development to more compatible areas.
30. Building Codes and Permits to Control Noise - Local government imposed requirements in noise impacted areas.
31. Noise Easements - Purchase of limited property rights in airport noise impacted areas for compatibility purposes.
32. Purchase Assurance - A purchase guarantee applied to noise sensitive properties within lightly or short-term impacted noise

areas which assures saleability and helps to maintain viable neighborhoods.

33. Soundproofing Programs - Acoustical attenuation treatment to reduce the impact of airport noise on houses, schools, etc., within the noise impact area.
34. Noise Use Fees - Special fees or surcharges based on the relative noisiness of different aircraft.
35. Shift Operations to a Reliever Airport - Certain operations shifted to a reliever airport to reduce the aircraft noise at a busy airport.
36. Local Pattern Restrictions - Limitations on flying over noise sensitive areas or facilities.
37. Navigational Aid Assisted Departures - Navigational aids installed to facilitate aircraft noise abatement procedures or local pattern restrictions.
